

Hearthmark

Peace of mind for the house they already live in

Quiet sensors · Family dashboard · No cameras in private rooms

Southern New Hampshire & Northern Massachusetts

hearthmark.care

Families want the house. Not a guess.

1 in 4

older adults fall each year

CDC

3M+

ED visits a year from older-adult falls

CDC

75%

of adults 50+ want to stay in their home

AARP

Assisted living is often \$6,200+ / month. Most families would rather keep the house.

Why current options fall short

Cameras feel invasive

Families reject cameras in bedrooms and bathrooms — exactly where many falls happen.

Wearables get abandoned

Pendants and watches only work if someone remembers (and wants) to wear them every day.

Alert fatigue is real

Raw alerts become noise. Families stop looking.

The adult child is left guessing

Between visits there is no calm view of whether the day looked like a normal day.

Hearthmark in one sentence

Dad stays in the house he built. The family stops guessing.

Quiet sensors

Radar fall detection, motion rhythm, leak & stove safety, optional meds and air — tuned to this house.

Calm alerts

The system learns a normal day. The family hears about meaningful change, not every footstep.

A human check

When something looks important, a person can verify before anyone panics.

Family dashboard

All clear / last sync. The adult child, sibling, and parent see the same quiet picture.

Technician-tuned to the household

We walk the rooms, learn supper time and the dog's spot, and place sensors accordingly.

Radar fall detection

Touchless. Works in the dark. No camera.

Motion & rhythm

A quiet picture of a normal day.

Leak & stove safety

Shutoff and alerts for the rooms that matter.

Medication (optional)

A dispenser the family can see was used.

Air quality (optional)

VOC / CO style sensors where they help.

Privacy by design

Zero cameras in bedrooms or bathrooms.

Hearthmark watches the house. Remedy can visit.

Some families also want a licensed nurse to stop by. That visit is booked with Remedy Integrative Health & Spa in Nashua — on Remedy's calendar, in Remedy's existing practice. It is optional and separate from Hearthmark monitoring.

Hearthmark does

Sensors, install, dashboard, alerts. The house stays the product.

Remedy can do

In-home or in-clinic wellness checks the family books themselves.

What this is not

Not Medicare billing. Not 24/7 clinical monitoring. Not a replacement for 911.

hearthmark.care/partners/remedy

Southern NH & Northern Massachusetts

A free readiness assessment in the home. No obligation. From there the family picks a kit tier.

Essential

\$1,500 install

\$99 / mo

Core sensors + monitoring + family dashboard

Standard

\$2,500 install

\$149 / mo

Adds more rooms and household safety

Premium

\$3,500 install

\$199 / mo

Full kit + the closest watch on the house

NEXT STEP

Book a free readiness assessment

We walk the rooms with the family and write a one-page plan — no obligation, no install. Then you decide.
